第二步：获取MAC Address

在弹出的命令行窗口中，输入ipconfig /all并回车。要利用以太网网卡的物理地址，不能利用无线网卡的物理地址

The image shows two parts of the Windows 7 interface. On the left, the Start menu search bar contains the text 'cmd'. On the right, a command prompt window titled '管理员: C:\Windows\system32\cmd.exe' displays the output of the 'ipconfig /all' command. The output lists network adapters and their properties. A red box highlights the '物理地址' (Physical Address) for the '以太网适配器 本地连接:' (Ethernet adapter Local Area Connection), which is '5C-26-0A-47-09-48'. A red arrow points from this highlighted address to the text '此即为MAC Address' below the screenshot.

```
